

Establishing a Creation Care Council

The goal of a **Creation Care Council** is to bring together individuals who are passionate about being compassionate stewards of God's creation and who will lead their congregation in both action and education.

Set up an initial project that will get your congregation thinking and eager to become involved.

Mug Drive

collect mugs and add character to coffee time while eliminating the need for countless Styro-foam cups.

Electronics drives

collect old computers and electronics so they can be recycled properly.

Energy Audit

Once your CCC has been established, conduct an Energy Audit through your local power company to determine how you can make your church building more energy efficient.

Simple measures can be taken to drastically reduce energy consumption as well as utility costs!

Build Partnerships with other churches and organizations in your community. Working with other churches allows both to share their strengths, creating a more powerful ministry.

Many organizations have well-established programs to which a congregation can easily contribute. For example, **collecting tabs from aluminum cans** before recycling is an easy way to help out your local Ronald McDonald House.

Get involved in your community by attending local **Farmers' Markets**. Get to know your neighbor and your local environment in one place.

Above all: BE CREATIVE!!!
